

# Healthcare Facility Services

In the year 2000, there were 103,000 deaths in the United States acquired in healthcare facilities caused directly by healthcare-associated infections (HAI). By 2002, the estimated number of HAI in US clinics and hospitals exploded to 1.7 million cases, nearly 75% of which were deemed preventable according to the Centers for Disease Control.

Professional Building Services understands the critical role of cleaning in healthcare facilities, which is focused on preventing healthcare-associated infections. We employ degreed healthcare professionals to partner with your facility management team in managing and staffing your environmental services program. Our fully supervised program ensures proper disinfecting and best practices that meet and then exceed the toughest healthcare cleaning standards and regulations.

Following a tradition of excellence since 1981, our highly trained team works seamlessly to cover every aspect of your cleaning and maintenance needs. To meet the challenges of today's environmental services manager, we incorporate the latest technology, most efficient processes, on-site supervision, responsive account managers, staff development, and flexible service programs, all knit together with our own proprietary quality control program.

At PBS, we maintain our own fully documented, trained, and supervised staff for the safety of your co-workers, patients, and guests. Equipped with the latest communications technology, our account executives are on-call 24/7 for any special client requests or emergencies.

We offer comprehensive housekeeping services for your entire facility. Immaculate entries, high-gloss tile floors, and lobbies instill confidence in your healthcare facility the moment patients and guests arrive. Hallways, public areas, offices, conference rooms, and public restrooms are maintained on a daily basis by our uniformed, fully supervised staff.

Exam and procedure rooms, operating rooms, emergency rooms, patient rooms, waiting areas, patient restrooms, phlebotomy and lab areas, X-ray, and MRI departments are meticulously cleaned and disinfected for your staff and patients' protection. In addition, we provide bio-hazardous waste product management and recycling programs.

Professional Building Services programs are based on the best practices from organizations like AHE (Association for the Healthcare Environment), APIC (Association for Professionals in Infection Control and Epidemiology), AORN (Association of periOperative Registered Nurses), NEHA (National Executive Housekeepers Association), and the CDC (Centers for Disease Control)

The comprehensive training of our healthcare services team permanently assigned to your facility includes Exposure Control Plan & Compliance, Hazardous Communication Standard, Blood Borne Pathogen Standard, MSDS Compliance, and Chemical Handling Compliance Standard. They are also trained to meet all of the requirements for Joint Commission standards and follow HIPPA regulations prior to assignment to your healthcare facility.

Additional training for staff assigned to your facility includes carpet care and cleaning, vinyl and rubber tile floor maintenance and refinishing, as well as specialized training in any exotic stone used in your facility.

This is just the beginning. Our experience in delivering quality services and our training in employee productivity means the most competitive rates in the industry. It's just not true that doing things right is more expensive.

Professional Building Services offers a range of routine cleaning, maintenance, and staffing services for small, medium and large healthcare facilities.

- Hospitals
- Clinics
- Physicians offices
